Overview

In this lab, you reviewed a scenario requiring you to design a Windows folder structure, and you implemented your design. Next, you used the Microsoft® Active Directory Users and Computers utility to create security groups that suited the requirements in the scenario. Finally, you applied those security groups to the folder structure you designed.

Lab Assessment Questions & Answers

1. When you designed a file system in the first section of this lab, why did you choose the structure that you selected?
2. As you look back on the file structure that you created, what changes would you want to make if you were to use it for a real college environment?

3. In this lab, you assigned members of the Faculty group full control of the Assignments folder. What risk does this pose?
4. What could you do to correct the situation described in question 3?
5. What Windows file security attribute allows a user to move through a folder to access files and folders beneath it?
6. What Windows file security attribute allows a user to view a file's contents?
